

The AWES project will monitor the conditions of the selected agricultural sector

AWES

Problem?

Solution: AWES

A CubeSat is a small 10x10x10cm cube that can monitor the agricultural industry from above. It's a mini satellite that is either contains one cube or several, each serving different purposes.

The expected life span of each CubeSat is 3 to 5 years

It is expected that one cubesat will cost under \$200 000, while this is price is high, it will save the farmers more in the long term by saving resources and increasing production of crops
